***Allowable Subject Matter***

1. Claims 1-7 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art commonly teaches a photo-detecting device with a first substrate containing a plurality of photodiodes, bump connected to a second substrate with supporting circuitry. The prior art also teaches switches associated with the photodiodes. The closest prior art also teaches photodiodes on a first substrate and supporting circuitry on a second substrate including an integrating circuit and hold circuit corresponding to each photodiode where the output from each of the photodiodes passing through the hold circuit are connected by a common wire. However, the prior art fails to teach the supporting circuitry of the second substrate having a single integrating circuit having an input terminal electrically connected to a common wire that connects switches corresponding to each photodiode, for outputting voltage corresponding to the stored electric charge.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

**Conclusion**

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Seiichiro (JP 2001291877) teaches a solid-state image pickup device with first and second substrate where each photodiode has a corresponding integrating circuit.

Yang (US 6809769) teaches a photo imaging device with a first substrate with an array of photodiodes and a second substrate bump connected with the first comprising support circuitry.

Saito (JP 2001242253) teaches switches on a substrate, which is the same substrate comprising the photodiodes.
